RXB39X

Wireless Receiver 4ch Module "RXB39-X"

• COMPATIBILITY: 433MHz wireless receiver module designed for remote control and automation applications
• CHANNELS: Features 4 independent receiving channels for versatile signal processing and control capabilities
• DESIGN: Compact circuit board with integrated antenna spring and high-quality components for reliable signal reception
• TECHNICAL SPECS: Operating voltage range of 3.3V to 5V DC, with built-in superheterodyne receiving circuit
• INSTALLATION: Standard 7-pin interface layout for straightforward integration with microcontrollers and development boards
