NAW15

5V-9V 15W WIRELESS CHARGING MODULE C TYPE

• Multi-level protection:The QI wireless charger transmitter module has built-in short-circuit and overvoltage protection to ensure safe charging. Overtemperature protection. If the temperature is high during charging, charging will automatically stop for 1 minute, then the temperature will drop and recharge. Overcurrent protection. If the output current is large during charging, charging will automatically stop to prevent damage to the charger.
• Support Qi charging:The wireless charger module has broad compatibility, allowing charging any device that supports the Qi standard for universal micro-interface, making it reliable and easy to use.
• Easy to identify:The wireless charger PCBA circuit board has a foreign object detection function, when there is a metal foreign object on the transmitting coil of the module, the blue LED flashes, after the metal foreign object is removed, the blue LED goes off and the red LED lights up
• DIY creativity:QI standard Wireless charging standard Module Suitable for DIYYou can pass the box (not too thick) or fix it on furniture and other equipment, but please note that the transmission effective distance is only 5 mm.If the phone is installed with a phone case, please also include the thickness of the phone case
