BUTMC

Electronic Building Blocks Big Key Button Module

• Arduino electronic building block button module arduino special module.
• Big Keyboard module allows you to use an analog port to read the five key states with sensor expansion board can be done using multiple buttons for interactive work
• Analog acquisition, press the different buttons of different voltage output
• High quality Omron button, sensitive and durable Port compatible sensor extension board when pressed output low level, release to maintain high level
• For arduino platform, compatible with arduino sensor interface convenient to connect arduino sensor expansion board.
