

P65WD

FAST CHARGING MODULE TYPE C INTERFACE PD3.1 QC3.0

- [Flexible Voltage Output] Supports 5v, 9v, 12v, 15v, 20v fixed voltage output without voltage step.
- [Precise Control] Tilt switch allows precise adjustment of voltage output according to the table on the module's back, ensuring efficient charging.
- [Versatile Usage] Welding dc line heat shrink tubes enable charging of laptop computers and pd mobile power.
- [Comprehensive] Input over/under voltage, over current , output over current/short circuit , and over temperature ensure safety.
- [Support Various Protocols] For bc1.2, ios protocol, qc2.0 and qc3.0, fcp and scp fast charging protocols, afc, mtk pe+1.1 and pe+2.0, pd2.0 and pd3.1(pps) output protocols.
