LDR

PHOTO SENSITIVE RESISTANCE 5MM

• The Photoresistor, also known as LDR (Light Dependent Resistor), changes the resistance with the variation in the amount of light.
• This LDR has a resistance of 5-10k Ohm in light and about 500k Ohm resistance in the dark.
• Automatic Headlight Dimmer | Nightlight control | Oil burner flame out | Streetlight control | Absence / Presence (Beam breaker) | Position sensor
• Diameter : 5 mm
• Light Resistance : 10K Ohm @ 10Lux
• Dark Resistance : 1.0M Ohm @ 0 Lux Max.
• Voltage : 150 volt Max. Power : 100 mW
• Operating Temperature : -30° to 70° C
