Pulse Sensor Heart Rate Sensor

- Pulse sensor Arduino is used to test the heart rate sensor,
- Students, artists, athletes, creator, game developer, or mobile terminal can develop interactive work related to heart rate.
- Sensors can be put on the finger or earlobe, through interconnected line can be connected to the Arduino.
- It also has an open source app, can real time your heart rate graph display. Essence is a integrated optical amplifying circuit and noise eliminating circuit heart rate sensor.
- Power supply: 3-5 v
- Diameter: 16MM
- Magnification: 330
- LED wavelength: 609 nm
