R5807

RDA5807 FM STEREO MODULE

• I2C serial data bus interface communication, support external reference clock input mode.
• The fully integrated COMS process single-chip integrated circuit has extremely low power consumption.
• Built-in high-precision A/D (analog-to-digital converter) and digital frequency synthesizer.
• Built-in LDO adjustment, low power consumption, ultra-wide voltage range (2.7-3.6VDC).
• Built-in noise cancellation, soft mute, bass enhancement circuit design.
• High-power 32Ω load audio output, direct earphone connection, no need for external audio driver amplification.
