

LD220

Single Channel Vehicle Loop Detector

- Single Channel Inductive Vehicle Loop Detector
- Used for parking barrier and access control applications
- Automatic barrier control when vehicle is in the loop
- Multilevel lightning protection, High temperature stability, automatic loop malfunctioning sensing
- Can detect the vehicle driving direction with two loops
- Supply Voltage: 220V, Output Relay: 220V/5A
- Reaction Time 10ms
- Sensitivity is Adjustable in 4 increments
