

# W1219

## Temperature Controller Module Sensor DC 12V

- To measure and display temperature
- To Turn any application ON/OFF based on temperature reading. (Both AC and DC)
- Example Project:- A.Fire alarm system . B. Auto cut off Electric Water Heater
- This is XH W1209 digital temperature controller Module W/ Display and NTC Waterproof Temperature Sensor.
- The thermostat will display the current temperature in °C by default.
- When in any other mode making no input for approximately 5 seconds will cause the thermostat to return to this default display.
