T3116R

TPA3116D2 50WX2 Amplifier Board 4-24V 100W

• Tthe size of the finger, suitable for small space embedded, output more than 30W need to add heat sink.
• Boot without annoying POP sound.
• There is no current sound in the work of the power amplifier. The input is not welded.
• Try it clearly. If there is a noise/current sound signal input, the noise signal will be amplified.
• CS control shutdown current is only 0.4mA. The quiescent current is 28mA.
• High gain amplification (36DB). Ideal for weak signal amplification, eliminating the need to add preamps and reducing costs.
• The computer audio input must be changed to 20DB gain.
• With output short circuit protection. Troubleshooting immediately resumes normal operation.
• A variety of products Pin and size are fully compatible. Convenient product replacement. OEP30Wx2, OEP50Wx2.
