ESP01A

USB-UART/ESP8266 Adapter Program Wifi Module

• Driver Chip: CH340G
• Supports all basic windows versions.
• The adapter plate integrated 1000μF solid capacitors to ensure the current supply
• The power supply will not be a problem to make WIFI module crashes unresponsive.
• Using 3225 SMD crystal oscillator, improve the stability of serial work, on a beautiful and tall.
• Working voltage: 4.5V – 5.5V (Onboard 3.3v LDO Regulator)
• Working current: 300mA (LDO regulator can supply)
