

RXB6

Wireless Receiver 4Ch Module "RXB6" 433

- RXB6 433Mhz Superheterodyne Wireless Receiver Module work with our 434MHz transmitters.
- They can easily fit into a breadboard and work well with microcontrollers to create a very simple wireless data link.
- Since these are only receivers, they will only work communicating data one-way, you would need two pairs (of different frequencies) to act as a transmitter/receiver pair.
