RXB6 Wireless Receiver 4Ch Module "RXB6" 433

×

• RXB6 433Mhz Superheterodyne Wireless Receiver Module work with our 434MHz transmitters.

• They can easily fit into a breadboard and work well with microcontrollers to create a very simple wireless data link.

• Since these are only receivers, they will only work communicating data one-way, you would need two pairs (of different frequencies) to act as a transmitter/receiver pair.
